PROFILE SUMMARY

Computer Science undergraduate at KL University (2027) with hands-on experience in Python, FastAPI, and MySQL. Built full-stack and ML-based web applications using Scikit-learn, XGBoost, LightGBM, and TF-IDF for insurance risk prediction and NLP-based candidate-job matching. Strong fundamentals in DSA, RESTful APIs, Agile/SCRUM, CI/CD, and cloud deployment. Seeking internship/entry-level roles in Software Development or AI/ML Engineering.

EDUCATION

KL University — B.Tech in Computer Science *Sep 2023 – May 2027*
CGPA: 9.40/10 • Full-time • Vijayawada, Andhra Pradesh

Sri Chaitanya Junior College — Class XII (MPC) *2021 – 2023*
Board: BIEAP • Score: 98.2% • Full-time

Ratnam High School — Class X *2019 – 2021*
Board: BSE Andhra Pradesh • Score: 100% • Full-time

EXPERIENCE

Web Development & AI Intern *June 2025*

- Built responsive web applications using HTML, CSS, and JavaScript following Agile/SCRUM sprint workflows.
- Applied supervised machine learning concepts using Scikit-learn for data preprocessing and model evaluation tasks.
- Explored cloud deployment fundamentals, CI/CD pipelines, and application hosting concepts using cloud platforms.

PROJECTS

ZensureX — Automatic Income Protection for Delivery Workers *2025*
Python, FastAPI, Scikit-learn, XGBoost, LightGBM, MySQL, REST API — Guidewire Hackathon — Live Demo — GitHub Repo

- Built the ML-to-backend pipeline for ZensureX, an AI-powered insurance platform that automatically pays delivery and gig workers when rain, heat or pollution stops them from earning, developed at a Guidewire hackathon.
- Trained and evaluated machine learning models (Random Forest, XGBoost) for insurance risk scoring and predictive analytics.
- Engineered features from external Weather API data (rainfall, environmental factors) to improve risk prediction accuracy.
- Developed and connected RESTful API endpoints using FastAPI for insurance recommendations, payout estimation, and fraud analysis, following CI/CD-driven development practices.

AI Resume Skill Matcher — Resume Screening & Candidate-Job Matching Tool *2025*
Python, FastAPI, Scikit-learn, TF-IDF, NLP, HTML, CSS — Personal Project — GitHub Repo

- Evaluated 10+ sample resumes using TF-IDF vectorization and Cosine Similarity for accurate skill-based candidate-job matching.
- Built a FastAPI backend for resume parsing and automated skill analysis, reducing manual screening workflow.
- Developed and deployed a frontend interface for resume uploads with real-time match scoring and results visualization.

Freelancer Job Finder Platform — Location-Based Job Discovery App *Oct 2024*
React.js, JavaScript, HTML, CSS, REST API — Personal Project — GitHub Repo

- Built a location-based job discovery platform supporting job listings across 10+ cities.
- Implemented role-based routing and separate dashboards for two user types: freelancers and customers.
- Developed a responsive and dynamic React.js UI with optimized component performance for seamless navigation.
- Designed interactive frontend components to improve job search, application workflows, and overall user experience.

TECHNICAL SKILLS

Languages: C, Python, JavaScript
Web / Backend: HTML, CSS, FastAPI
AI / ML: Scikit-learn, XGBoost, LightGBM, TF-IDF, Cosine Similarity, NLP, Pandas, NumPy, Matplotlib, LangChain, LangGraph, RAG Pipelines, Vector Databases
Databases: MySQL
Strong Subjects: Data Structures & Algorithms, Machine Learning, DBMS, Computer Networks, OOP
Practices: Agile/SCRUM, CI/CD
Tools: Git, GitHub, VS Code, Jupyter Notebook

ACHIEVEMENTS

- Won internal round, Smart India Hackathon — KL University (2024)
- Selected for startup ideation funding — Ideathon 2024, KL University
- Solved 300+ problems on LeetCode (Data Structures & Algorithms)
